Office Action Summary

Art Unit: 1763

15. Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

-In claim 1, the term "composed" should be replaced with the term "comprised". (The term composed is not standard legal terminology.);

-In lines 11-13 of claim 1, it is unclear whether a metal silicide layer must be formed on the oxygen impervious, barrier layer.;

-Claim 2 conflicts with claim 1 upon which it depends. (Claim 1 recites that the Si substrate is first oxidized to form an oxide layer on the Si substrate, and then an oxygen impervious layer is formed between the oxide layer, and the Si substrate. This suggests that some type of ion implantation step is conducted after the SiO₂ layer is formed such that implanted ion settles at the interface of the SiO₂ layer, and the Si substrate to form an oxygen impervious layer. Claim 2 recites that the oxygen impervious layer is first formed on the Si substrate using a N ion implantation step, and then the substrate is oxidized to form an oxide layer on the oxygen impervious layer.); and

-The wording used in claim 3 is very confusing, and should be reworded.

16. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
